Answers to The Family Joules.
1 B 2 D 3 B 4 Misprint in question. It takes 14 minutes to boil it, and 6 minutes to melt it. 5. B $6 . \mathrm{C} \quad 7 \mathrm{D} \quad 8 . \mathrm{B} \quad 9 . \mathrm{D} 10 \mathrm{D} 11 \mathrm{~A} 12 \mathrm{C} 13 \mathrm{D} 14 \mathrm{C} 15 . \mathrm{A}$
16. B 17. B 1767800 joules or $67.8 \mathrm{~kJ} .18 .20 .0 \mathrm{~g} \quad$ 19. 2090 joules

### 201.237 liters

I. 585 g Density $=$ mass $/$ volume, so density times volume $=$ mass. $80.0 \mathrm{~cm}^{3}$ times $7.31 \mathrm{~g} / \mathrm{cm}^{3}=585 \mathrm{~g}$.
B. Ni has a larger volume. Since $\mathrm{D}=\mathrm{m} / \mathrm{V}$, the larger the density, the smaller the volume. Lead is denser than nickel, so the same mass of lead must have a smaller volume than that of nickel.
II. $\mathrm{q}=\mathrm{mc} \Delta \mathrm{t} . \quad 4180=50.00(4.18) \mathrm{x} \quad \mathrm{x}=20 .{ }^{\circ} \mathrm{C}$

The final temperature of the water is $20 .+15=35^{\circ}$
